Project Design Phase-II

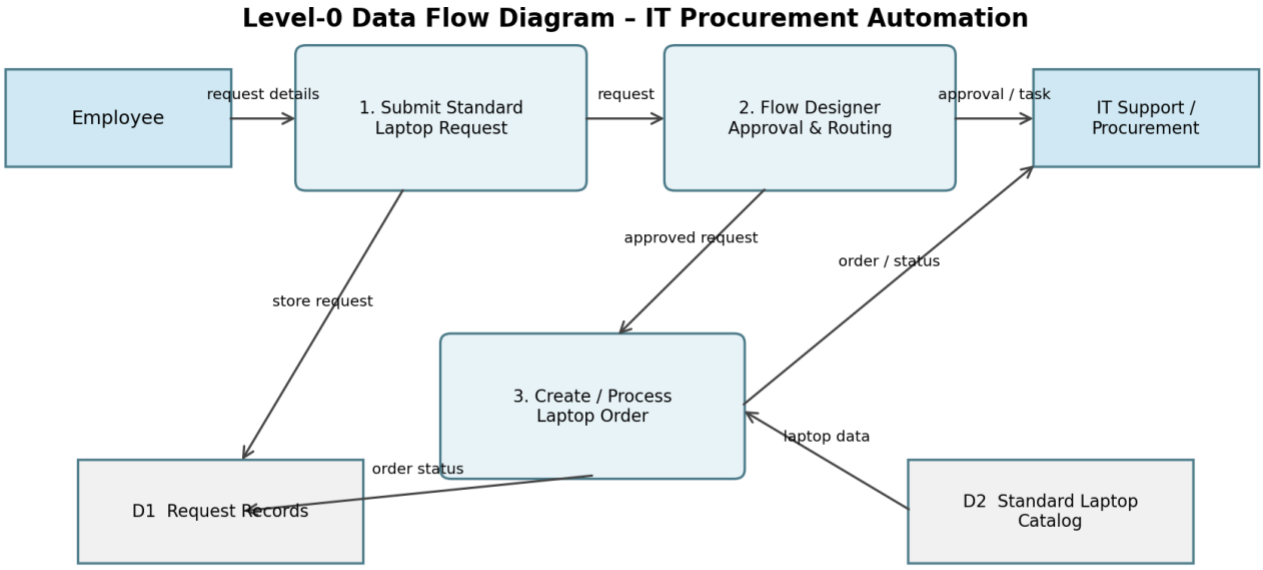

Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-3075
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Data Flow Diagram:

A Data Flow Diagram (DFD) represents how information moves through the proposed IT procurement system. The diagram shows how an employee submits a standard laptop request, how Flow Designer routes and manages approval, and how IT/Procurement processes the approved order and updates its status.

Example: Level-0 Data Flow Diagram (Project Specific)

Flow Designer automates routing, approval, order processing and status visibility for standard laptop requests.

Key flow: Employee request → Flow Designer approval/routing → IT/Procurement processing → order/status update.

User Stories

Use the following user stories to describe the main functional requirements of the IT procurement automation project.

User Type	Functional Requirement (Epic)	User Story ID	User Story / Task	Acceptance criteria	Priority	Release
Employee	Laptop Request	USN-1	As an employee, I can submit a standard laptop request with the required details so that the request can enter the automated procurement workflow.	I can submit a valid request and receive a confirmation/status update.	High	Sprint-1
Employee	Request Status	USN-2	As an employee, I can view the status of my laptop request so that I know whether it is submitted, approved, or being processed.	The current request status is visible and updated after workflow actions.	High	Sprint-1
Employee	Request Tracking	USN-3	As an employee, I can receive workflow notifications for approval or processing updates so that I do not need repeated manual follow-up.	Notification is generated when the request moves to the next workflow stage.	Medium	Sprint-2
IT Support	Approval Workflow	USN-4	As IT support, I can review and approve standard laptop requests routed by Flow Designer so that eligible requests are processed consistently.	Approved requests move automatically to the next stage; rejected requests are recorded.	High	Sprint-1
IT Support	Request Management	USN-5	As IT support, I can view request details and update the processing status so that the employee has clear visibility.	Request details and status can be updated and tracked.	High	Sprint-1
Procurement/Admin	Order Processing	USN-6	As procurement/admin, I can process an approved standard laptop order using the standard laptop information so that manual data entry is reduced.	Approved requests provide the required laptop/order information for processing.	High	Sprint-2
Procurement/Admin	Order Status	USN-7	As procurement/admin, I can update the order status so that the employee and IT support can track progress.	Status changes are stored against the correct request.	Medium	Sprint-2
IT Support	Reporting	USN-8	As IT support, I can view request and order records so that repeated manual follow-up and errors are reduced.	Relevant request records can be reviewed with their latest status.	Low	Sprint-3

Project Goal: Automate standard laptop procurement requests using Flow Designer to reduce repetitive manual work, improve processing consistency, and provide clear request status visibility.
