Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team Members	Karpagam R (Team Leader), Padma Priya R, Mariyam Asiya S, Shreya S

Empathy Map Canvas

User Persona: Employees / IT support staff who need standard laptops through the IT procurement process.

SAYS • I need a standard laptop quickly. • The ordering process should be simple. • I want to know the status of my laptop request.	**THINKS** • Manual approval and ordering may take too much time. • The same standard laptop request should not require repeated manual work. • Automation can make the process faster and more reliable.	**DOES** • Submits a laptop request. • Waits for approval and procurement processing. • Follows up with IT or procurement for the order status.
FEELS • Frustrated by delays in manual processing. • Concerned when the request status is unclear. • Satisfied when the request is processed quickly and automatically.	**PAINS** • Manual data entry and repetitive tasks. • Long approval and procurement time. • Lack of clear request tracking. • Possibility of errors in standard laptop orders.	**GAINS** • Faster standard laptop ordering. • Reduced manual effort. • Consistent and accurate processing. • Better visibility of request status. • Improved IT procurement efficiency.

Goal: Understand the user's needs, frustrations, and expectations so the IT procurement process can be streamlined by automating standard laptop orders using Flow Designer.
