Project Design Phase
Proposed Solution Template

Date	29 September 2026
Team ID	SWTID-2026-3075
Project Name	Streamlining IT Procurement – Automating Standard Laptop Orders
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	**Problem Statement (Problem to be solved)**	**Standard laptop procurement is often handled through multiple manual steps.** Employees may need to provide information repeatedly, approvals can take time, and IT teams may manually track requests and follow-ups. The project aims to streamline this process using ServiceNow automation.
2.	**Idea / Solution description**	Develop a ServiceNow-based automated workflow for standard laptop orders. An employee submits a Service Catalog request, the system validates required details, routes the request for approval, creates procurement/fulfillment tasks, tracks status, and sends automated notifications to the requester and IT team.
3.	**Novelty / Uniqueness**	The solution combines a standardized laptop request form with automated validation, approval routing, task creation and status notifications in one ServiceNow workflow. It reduces dependency on manual coordination and provides a consistent procurement process.
4.	**Social Impact / Customer Satisfaction**	Employees get a simpler and more transparent way to request a laptop and check progress. IT teams spend less time on repetitive coordination, while standardized requests can reduce missing information and processing errors.
5.	**Business Model (Revenue Model)**	For an organization, the solution can reduce administrative processing effort and improve procurement efficiency. As an enterprise workflow solution, it can be implemented as part of a ServiceNow IT service management / procurement automation initiative. The project itself is intended as an internal process-automation solution rather than a direct consumer product.

S.No.	Parameter	Description
6.	**Scalability of the Solution**	The workflow can be extended beyond standard laptops to monitors, keyboards, mobile devices and other IT equipment. It can also support multiple departments, approval levels, locations and procurement integrations while remaining on the ServiceNow cloud platform.
